NOTES

References to dollars ($) are to United States dollars, unless otherwise stated.
Three dots (…) indicate that data are not available or were not verifiable at the
time of publication.
A dash, following a date (1979-) signifies in most cases that the project is ongoing.
Symbols of United Nations documents are composed of capital letters combined with
figures. Mention of such a symbol indicates a reference to a United Nations document.
The following abbreviations are used in this inventory.

United Nations Bodies

APCWD  Asian and Pacific Centre for Women and Development
APDI  Asian and Pacific Development Institute
ATRON  African Training and Research Centre for Women
CEIADE  Latin American Demographic Centre (Centro Latinoamericano de Demografía)
CREFAL  Regional Centre for Adult Education and Functional Literacy for Latin America
(Centro regional de educación de adultos y alfabetización funcional de América Latina)
CSDHA  Centre for Social Development and Humanitarian Affairs
DIESA  Department of International Economic and Social Affairs
DIESA/DEPA  Office for Development Research and Policy Analysis
DIESA/POP  Population Division
DTCD  Department of Technical Cooperation for Development
EAMI  East African Management Institute (now African Regional Management Development Centre)
EAPRO  East Asia and Pacific Regional Office (UNICEF)
ECA  Economic Commission for Africa
ECE  Economic Commission for Europe
ECIA  Economic Commission for Latin America (Comisión Económica para América Latina - CEPAL)
ECWA  Economic Commission for Western Asia
ESCAP  Economic and Social Commission for Asia and the Pacific
FAO  Food and Agriculture Organization of the United Nations
FFHC  Freedom From Hunger Campaign
IBRD  International Bank for Reconstruction and Development
IIDEF  African Institute for Economic Development and Planning
(Institut africain de développement économique et de planification)
IFAD  International Fund for Agricultural Development
ILO  International Labour Organization
ILPES  Latin American Institute for Economic and Social Planning
(Instituto Latinoamericano de Planificación Económica y Social)
INSTAT  International Research and Training Institute for the Advancement of Women
OREFLC  Regional Office for Education in Latin America and the Caribbean
(Oficina Regional de Educación para América Latina y El Caribe)
PAHO  Pan-American Health Organization
SWECAP  Social Welfare and Development Centre for Asia and Pacific
UNCHS  United Nations Centre for Human Settlements (Habitat)
UNCRD  United Nations for Regional Development
UNCTC  United Nations Centre on Transnational Corporations
UNDP  United Nations Development Programme
UNDRO  Office of the United Nations Disaster Relief Co-ordinator
UNEP  United Nations Environment Programme
UNESCO  United Nations Educational, Scientific and Cultural Organization
UNETFSA  United Nations Educational and Training Programmes for Southern Africa
UNFPA  United Nations Fund for Population Activities
UNHCR  Office of the United Nations High Commissioner for Refugees
UNICEF  United Nations Children's Fund
UNIDO  United Nations Industrial Development Organization
UNITAR  United Nations Institute for Training and Research
UNRISD  United Nations Research Institute for Social Development
UNRWA  United Nations Relief and Works Agency for Palestine Refugees in the Near East
UNU  United Nations University
VFW  Voluntary Fund for the United Nations Decade for Women
WFP  World Food Programme (joint United Nations/FAO programme)
WHO  World Health Organization

Other acronyms

ADIDPA  Association of Development Research and Training Institutes of the Pacific and Asia
BWRWF  Bangladesh Women's Rehabilitation and Welfare Foundation
CID  Canadian International Development Agency
CIM  Inter-American Commission for Women
CORSO  Council of Organizations for Relief Services Overseas
CSW  Commission on the Status of Women
DANIDA  Danish International Development Agency
IASSW  International Association of Schools of Social Work
IEC  Information/Education/Communication
IPPF  International Planned Parenthood Federation
FP  Family Planning
MCH  Mother and Child Health
NGO  Non-Governmental Organization
NORAD  Norwegian Agency for International Development
OECD  Organization for Economic Cooperation and Development
PBFL  Programme for a Better Family Living
PAID  Pan African Institute for Development
TRA  Traditional Birth Attendants
SIDA  Swedish International Development Authority
USAID  United States Agency for International Development
UWT  Union of Women in Tanzania
I. DATA PRESENTATION AND ANALYSIS

A. INTRODUCTION

1. At its first session held at the Palais des Nations, Geneva, from 22 to 26 October 1979, the Board of Trustees of the International Research and Training Institute for the Advancement of Women (INSTRAW) reaffirmed the main guidelines of the overall activities of the Institute and established its first programme of work, covering the biennium 1980-1981.

2. In accordance with the recommendations made to and accepted by the General Assembly, the substantive activities of the Institute are grouped together under (a) research, (b) training and (c) information, documentation and communication. This document marks the first stage in the achievement of one of the permanent objectives of the research activities of the Institute, namely to collect, classify and analyse, on a continuous basis, information on research programmes and make it available to professionals within and outside the United Nations system, as well as to the general public. 1/

3. Under these terms of reference, INSTRAW was requested to prepare in 1980 a survey of "existing data and research activities carried out within the United Nations system and in international, regional and national institutions on women, to identify gaps in knowledge for further research", 2/ the preliminary results of the survey were to be submitted to the Copenhagen World Conference of the United Nations Decade for Women.

4. Initially, those responsible for this survey have concentrated on collecting data both within and outside the United Nations system, from non-governmental organizations, social science research institutes, foundations and universities. However, because of the difficulties of obtaining accurate and comprehensive data in the very short time available to them, they were forced to confine themselves to a more limited field of research, and as a result, this document is restricted to the first phase of the survey, namely an inventory of research on women conducted within the United Nations system. The second phase, which will be similar in approach and methodology, will be devoted to research activities outside the United Nations system.

B. METHODOLOGY

5. It is impossible to interpret the data, to understand the indices and tables, some of

which are annexed hereto, or to analyse the results without knowledge of the methodology used to
counter the survey, and of the various categories which were identified for data interpretation
purposes.

1. Field of research

6. This document, hereinafter referred to as Inventory, focuses on on-going research projects
on women, conducted or funded by organizations of the United Nations system in the developing
countries in the spheres of employment, health and education, together with certain related
spheres of the social sciences. We believe that a precise definition of the above terms will be
helpful in better understanding the document.

7. Research projects. By research projects we mean any project the ultimate purpose of which
is to undertake research in a specific sphere. This excludes operational projects which, while
they may have a research component, have a different goal, as is the case, for example, with the
Department of Technical Co-operation for Development (DTCD), several of whose projects include
research activities under technical assistance. These activities have not been mentioned in the
Inventory given that, in most cases, they do not constitute research per se, require no long-term
use of researchers, and have no separate budget, and no published results. In a few borderline
cases, however, where a project consists of several distinct phases, including a preliminary phase
devoted to in-depth action-oriented research which takes place at a different time and stands
apart from the rest of the operations, such a study has been taken into consideration.

8. On-going projects. The Inventory covers only on-going projects or those in preparation;
any previously published study has therefore been excluded. However, mention should be made
of the fact that the information received was frequently imprecise with regard to the starting
date and duration of the study. In such cases, the study was considered to be still in progress
if the only indication received was the date 1979; the study was considered to be completed if
it started prior to 1979, with the exception of those cases where a further check revealed that
the study was continuing.

9. Research on women. It has been stated repeatedly that "women's problems", are really
society's problems. Consequently, any research on a so-called women's issue is meaningless unless
seen in the perspective of society as a whole (particularly in such important spheres as rural or
urban development, economic and social change, health, science and technology, to mention but a few).

3/ In this document, the term "organizations of the United Nations system" is used to describe
the specialized agencies and all other bodies and departments of the United Nations system covered
by the Inventory.

4/ We wish to draw the reader's attention to the current nature of the research projects
enumerated heretofore. Many studies on women have been conducted within the United Nations system,
but they are not listed in this Inventory. In the near future, INSTRAW might undertake some
bibliographical research on this subject.

- 2 -
Nevertheless, women collectively and as members of a given society are placed in situations and faced with problems which are peculiar to them and require specific studies. It is these studies which we intend to cover in the Inventory when speaking of research on women. For the purposes of this work, research on women comprises any research project which meets the following criteria:

(a) The title of the study indicates that it concerns a specific group of women or women in general;
(b) The content of the research is by nature directed towards women, for instance family planning, nutrition, family health;
(c) The research is undertaken or funded by one of the United Nations bodies responsible for the advancement of women (African Training and Research Centre for Women (ATRCW), Asian and Pacific Centre for Women and Development (APCWD), Voluntary Fund for the United Nations Decade for Women (VFDW), etc.).

10. Research conducted or funded by an organization of the United Nations system. Where research projects are concerned, participation of organizations of the United Nations system takes many forms. It may be in the shape of a financial contribution (to fund a research project) or of technical assistance. It may involve a single organization or co-operation among several organizations, or even co-operation of an organization in the system with national research institutes, non-governmental organizations, foundations, etc. In this Inventory systematic account has been taken of all types of contributions from the various agents of the projects surveyed (see tables X, XI, XII, XIII, and XIV annexed).

11. Developing countries. In the course of its meeting at Geneva in October 1979, the Board of Trustees of INSTRAW expressed the wish that the Institute should be considered as an "umbrella organization" and should "place special emphasis on the situations and problems of women in developing countries". \(^5\) It is in this light that the initial Inventory covers only those developing countries belonging to the four regions which are the responsibility of the following regional commissions: Economic Commission for Africa (ECA), Economic Commission for Latin America (ECLA), Economic and Social Commission for Asia and the Pacific (ESCAP), Economic Commission for Western Asia (ECWA).

12. Research categories. Studies on women have been grouped and analysed in three principal categories based on the subtheme of the World Conference of the United Nations Decade for Women: Employment, Health and Education. \(^6\) In order to provide as all-round a view of the actual situation as possible, two complimentary categories have been added: "Status of women" and "Multidisciplinary studies". The Inventory will therefore comprise five categories:
(a) Employment: Research relating to the labour market, working conditions, production methods

\(^5\) E/1980/23, para. 35.

\(^6\) See General Assembly resolutions 33/185 and 33/189.
and techniques, income-generating activities;
(b) **Health**: Research on state of health, diseases, traditional practices, etc.;
(c) **Education**: Research covering forms of education, school curricula, illiteracy, standards of education, etc.;
(d) **Status of women**: Research dealing principally with the legal status of women, their place in the family and in society, their integration in the development process;
(e) **Multidisciplinary studies**: Studies covering employment, health and education.  

13. **Research subcategories.** However, within the five categories indicated above, it was necessary to determine more accurately the spheres in which research is being conducted. In the case of employment, for example, does the research focus on employment in rural areas, or on relationships between the employment of women and the number of children they have, or is its purpose to study employment statistics? For this reason, it was helpful to establish the following subcategories which, depending on the subject, might be used in conjunction with the five major categories listed above:

(a) **Statistics**: Collection of quantitative data. This subcategory is to be found in every sphere or category: in the "Employment" category, it covers labour statistics drawn up according to sex, economic contribution of women (household accounts), rate of absenteeism from work, etc. Under the "Health" and "Education" categories, the subcategory "Statistics" covers the relevant quantitative data and, in the "Status of women" category, it covers the whole range of research on indicators of women's integration in development;

(b) **Population questions**: Research dealing with population changes—population growth, fertility, age at marriage, migration, etc. This heading suggested itself automatically at the data-collection phase, because of the large amount of research that is linked to population questions. Consequently, the establishment of this subcategory made it possible to ascertain the exact scope of the study and to highlight the presence of the "Population questions" variable in studies on employment, health, education, and the status of women;

(c) **Rural areas and rural development**: Studies concerning the rural areas, participation in agriculture, and community development in non-urban areas. As in the preceding case, this subcategory suggested itself because of the frequency with which it appeared in the "Health" and "Status of women" categories. It made it possible to identify precisely whether studies on those subjects concerned women in rural areas especially. As for employment, all of the studies on rural development have been categorized as studies on employment in rural areas (see para. 25 below);

---

The term "multidisciplinary" was chosen because it is used by most of the organizations of the system to describe their participation in research which deals simultaneously with several spheres. It would be altogether more accurate to use the term "multidisciplinary studies" when several researchers from different disciplines co-operate, each within his or her own specialization, on a single study, and to use the term "plurithematic studies" when a single study deals with several themes, although not necessarily calling on the services of researchers from different specialties. Both types of study were surveyed, but it was impossible to distinguish between them in the Inventory.
(d) Equality between men and women: Research dealing with sex-based discrimination. Taken in conjunction with employment and education, this subcategory highlighted research which deals with the problem of differential treatment of men and women.

14. The subcategories defined below are not found in all the categories but do correlate with some of them:

**Sphere (or category) of employment**

(a) Technology: Covers research dealing with traditional technologies, mechanization, appropriate technology;

(b) Social services and social legislation: Includes studies on social infrastructure and social security laws (maternity care, working women, preschool nurseries, etc.);

(c) Commerce: Covers studies on marketing, co-operatives, markets;

(d) Handicrafts: Refers to studies on craft activities and small-scale industry;

**Sphere (or category) of health**

(e) Nutrition: Covers research relating to mother and child care and to problems of nutrition, and consumption and production of foodstuffs;

(f) Family health: Covers the spheres of hygiene, the environment, drinking water;

**Sphere (or category) of the status of women**

(h) Apartheid: Studies on racial discrimination;

(i) Communications: Studies covering the mass media, their influence on women, and the image of women that they project;

(j) Legislation: Research on legislative measures and reforms concerning women;

(k) Political participation: Studies dealing with political activity, creation of political awareness, and decision-making in society.

There are no subcategories which correlate with education.

2. **Data collection**

15. Information and data on research projects within the United Nations system were collected in the following manner. First, a letter was sent to the organizations of the system requesting them to inform the compilers of the Inventory of any studies relating to women which they were conducting or in which they were participating. Twenty-six replies were received from specialized agencies and United Nations bodies and six replies from the regional commissions and United Nations regional centres for women. The replies were supplemented in various ways: by requesting additional information, by examining documents published by the organizations concerned, by consulting internal documents which they were kind enough to provide, and, lastly, by cross-checking data procured by various other data sources. However, despite this work of compilation, some research projects on women have not been listed, for various reasons: some organizations replied that the data requested
required searches which they were not in a position to carry out at the time; others sent us documents which had been prepared prior to our request and had not been updated; others were not able to supply us with project documents and reports not intended for general distribution; and others sent us data that had already been processed by computer. We tried to fill the gaps by drawing on a variety of data sources but, given the time factor, it proved impossible to collect all the information, it being currently dispersed, fragmentary, or incomplete.  

3. Data presentation

16. The studies covered in this document are set out at the conclusion of the introductory chapter on the basis of the following model:

(a) Number: Project code number (INSTRAW reference number of the project);

(b) Country: Only indicated when it is a national study. Where a study deals with several countries on the same continent, the word "regional" used in conjunction with the name of the continent (Africa, Asia, Latin America, Western Asia), has been used as a descriptor. Finally, the expression "interregional" is used when the study covers several countries on different continents;

(c) Title of study: French title or title in original language as appropriate;

(d) Description: Summary contents of the study, as supplied;

(e) Executing or funding agency: Name of the organization or organizations of the United Nations system participating in the study, and of any non-United Nations co-operating agencies;

(f) Cost: Expenditure allocated to the study (this information is rarely provided);

(g) Duration: Starting date and planned duration of the study;

(h) Subcategory: Indicates the subcategory within one of the five major categories selected for the Inventory.

17. The research projects have been set out in five parts corresponding to the five major categories defined above. Within each of these parts, they are classified in the following order: national studies, regional studies, interregional studies. The regions are classified following the practice in the United Nations system for the regional commissions, by English alphabetical order: Africa, Asia and the Pacific, Latin America and Western Asia.

18. In total, 225 research projects have been enumerated, but since many of the regional and interregional projects encompass several countries, the research projects enumerated by country

\textsuperscript{9/} Attention is drawn to the remarkable work done by UNICEF, pursuant to our request, which that agency set out in the report submitted to its Executive Board, entitled "Women, children and development" (E/ICEF/L.1409).

\textsuperscript{2/} Given that the Inventory constitutes a preliminary stage of research and should be updated periodically, it will be possible to mitigate these shortcomings in future INSTRAW publications.
amount to 437. The data have been processed on the computer and stored on magnetic tape for regular updating.

19. When consulting the diagram and tables annexed to this document, the reader should bear in mind that the figures do not add up; the total number of research projects in progress always exceeding the total number of projects. First, regional research projects are counted for each separate country concerned; secondly, projects are counted again for each participating organization and, thirdly, the two elements of country and organization are combined. All percentages have been calculated on the basis of the number 437 which, as we explained, represents the total number of research projects enumerated by country.

C. SUMMARY OF RESULTS

20. The World Plan of Action gives high priority to national, regional and international research activities, and to data collection and analysis on all aspects of the situation of women. Since adequate data and information are essential in formulating policies and evaluating progress and in effecting attitudinal and basic social and economic change. 10/

21. In submitting the Inventory of the research projects concerning women carried out within the United Nations system, INTRAW does not claim to give a comprehensive account of the studies and research undertaken in implementation of the goals of the United Nations Decade for Women in the period since the World Plan of Action was drawn up: as already been stated, only research in progress has been included, but we nonetheless hope that the Inventory will help to ensure that readers are better informed with regard to studies concerning the status of women, the frequency of such studies and their geographical distribution, and that the organizations of the United Nations system participating in such activities are more widely known.

22. The tables were simplified in order to make more readily understandable the data: some of the tables in which only the most significant data were included are annexed.

23. If studies concerning women currently in progress within the United Nations system, are first of all considered from a global point of view, it will be seen from the following table that studies on employment and the status of women clearly predominate over those relating to

health and education and comprise 66 per cent of studies in progress.

B/ The expression "Not specified" has been used when the theme is not indicated.

B/ All other subcategories: handicrafts, commerce, equality between men and women, social security, statistics.

25. The table shows that a large number of studies have been carried out on rural employment. This is largely to be explained by the sizable number of studies concerning the integration of women in rural development; these studies have been listed under the heading "Employment" because it was considered that the many economic activities carried out by rural women constitute a major type of employment in the developing countries, even if such activities are seldom entered as such in the official statistics.

11/ In this connexion, see the ideas set out in document E/CN.6/635.
In decreasing order of importance follow studies concerning the labour market for women and their conditions of work, appropriate technology and, finally, the relationship between the occupational activity of women and population issues (for a further discussion of this topic see para. 32 below). These areas of concern are in line with the recommendations of the Mexico Conference for a better understanding and evaluation of the economic activity of women in rural areas, for an alleviation of their drudgery through study of appropriate technology, and for an improvement of their status in the labour market through development of income-generating activities. With regard to this last point, however, it appears that a number of fields which do, in fact, provide opportunities for cash income are not being studied.

26. There is indeed very little research into the handicraft activities of women and home-based work and fewer than five per cent of studies concern women in business and co-operatives; there are no studies of women in service industries, although they constitute a significant proportion of the female labour force in Asia and Latin America particularly, and few studies have been carried out on the employment of women in industry. Although there have been several studies on the effects of agricultural modernization on the status of rural women, only one study has explored the consequences of the introduction of industrialization on the lives of women, their incomes (elimination of the sale of handicraft products) and their status within the family.

27. In the same context, there is no sign of research into the impact of multinational corporations on the employment of women (migration to towns, shift to wage-earning occupations, low productivity work, etc.). In this connexion it is appropriate to recall the statements made at the preparatory meeting on the role of women in industrialization in the developing countries held at Vienna in November 1978: "It was also observed that under the present international economic system, most transnational corporations located industries in developing countries in order to exploit cheap and relatively unorganized labour. Some enterprises particularly sought female labour because it was the most easily exploited in industries such as electronics, textiles, food-processing industries etc. Some transnational corporations were, in effect, often exporting a part of the production process that was labour-intensive to the developing countries, in which adverse employment conditions were created....". Another paragraph of the report prepared by UNIDO for the Preparatory Meeting echoes these views: "Data and proper methodology for measuring women's existing and potential contributions to industrialization were crucial to effective

---

12/ According to ILO, women in Latin America represent more than half of the labour force in the tertiary sector; see E/CN.6/631, foot-note 30, p. 29.

13/ In this connexion, the reader's attention is drawn to previous ILO publications and to its bulletin *Women at Work*, which contains interesting references to studies on women workers.

14/ A/CONF.94/BF/1, para. 31.
planning of industrialisation programmes aimed at fully utilizing available human resources in developing countries. In most developing countries, however, the research required to develop such data and methodology was still to be undertaken. It is with this perspective in mind that the UNIDO secretariat is currently carrying out two preliminary studies, included in this Inventory, concerning women in the food and textile industries.

28. Most of the organizations of the United Nations system emphasize the need to expand statistical information concerning women in all fields. As regards the Inventory, the following number of statistical studies was recorded for each of the relevant categories: 8 statistical studies on employment, 8 statistical studies on health and 13 statistical studies on the status of women (index of integration in development). No statistical research into education was reported.

29. A macro-statistical approach is most often adopted with regard to statistical data in the field of employment (occupations according to sex, rates of absenteeism among male and female workers etc). Only a few documents refer to studies of household budgets and use of time, although the micro-statistical approach which they represent is of undoubted relevance in the case of women. In a report submitted at Vienna to the Commission on the Status of Women, ILO did, however, state that it was establishing survey procedures for household budgets and data-gathering techniques in order to correct the tendency of traditional labour statistics to underestimate the participation of women in economic activities. Mention should also be made of the National Household Survey Capability Programme (NHSCP), in which the United Nations Statistical Office, UNDP and the World Bank jointly participate; the Programme soon to be operational, will undoubtedly obtain very useful information on the socio-economic status of women, including information concerning employment. Finally, it will also be noted that there is little research dealing with underemployment and unemployment among women in the developing countries, although scientific innovations and technological progress are often reflected in a loss or reduction in the employment of women in rural areas.

Health

30. Studies concerned with health represent 15 per cent of all the studies enumerated and are

---

15/ A/CONF.94/BP/1, para. 39.

16/ It has not been possible to mention all the studies currently underway in various countries on the basis of the World Fertility Survey in the Inventory; it does, however, refer to the research plan for analysing information concerning women on the basis of the findings of the Survey (see below, project No. 228).

31. Health of mothers and children, nutrition, and the production, processing and consumption of food-stuffs - this is the subject-matter of more than 40 per cent of current health studies and undoubtedly represents one of the cardinal concerns of the United Nations system in the developing countries. Next are studies under the headings "Family health" or "Family welfare", which in fact encompass studies on fertility, family planning, contraceptive methods, sexuality etc. They amount to slightly more than 16 per cent of the studies relating to women's health and constitute what has been defined as "the strictly medical approach to family health".

32. In order to give a more exact idea of the significance of these parameters ("family size", family planning, fertility etc.) in the studies currently under way, the above-mentioned medical studies have been added, as have the studies which, in a broader sense, also deal with population questions, but from a more sociological point of view. It is these studies which, with regard to employment, education, the status of women and multidisciplinary studies, refer to the reciprocal effects of fertility and the principal category. One might mention, for example, the interregional study on "Women's employment, family spacing and size", 17/ the "Socio-demographic analysis of education and fertility among Kenyan women", 18/ or the interregional study on "Family structure, socio-economic change and demographic trends". 19/ It has been calculated that, of the total number of studies listed in the Inventory, 82, 20/ or 18.7 per cent, 21/ deal with population questions.

17/ Project No. 076 in the Inventory.
18/ Project No. 136.
19/ Project No. 231.
20/ This total also takes into account the frequency of the subcategory "Population questions" in the multidisciplinary studies.
21/ This percentage should be considered as approximate and slightly on the low side, since the subcategory "population questions" also included some studies on migrations.
questions. It can therefore be concluded that, at present, almost one study in five deals with the family, either from a strictly medical point of view (family health) or in its relationship to the economic activities, education, status and situation of women.

33. In matters relating to health it is also noticeable that questions of public health and environmental protection engender little interest. Despite the statements by WHO to the effect that 80 per cent of diseases in developing countries are water-borne, and despite the findings of that agency, 22/ very few of the studies currently in progress deal with this topic. It will, however, be noted that a preliminary study on drinking water supplies, selection of hand pumps and water treatment is in preparation; the study will involve the joint participation of WHO, the World Bank and UNDP.

Education

34. Studies on the education of women now account for 12 per cent of the total number of studies listed and are apportioned as follows:

<table>

</tbody>
</table>

35. A specific feature of educational studies, which are for the most part carried out under the auspices of UNESCO, is that they are generally conducted at the interregional level. 23/ Of these studies one in particular is distinctly predominant in the above table, since it concerns 16 countries and has therefore been counted 16 times; it belongs to the category "Education of women and fertility", 24/ with "Population questions" as a subcategory. A similar phenomenon occurs in the case of another UNESCO study on the subject of equality of opportunity. This group of projects, 25/ conducted at the interregional level, is of relevance to a number of countries, and the study has been counted as many times as there are countries concerned. The

23/ It will be recalled that the projects under consideration here are those currently under way; for additional information on certain studies recently completed, the reader is referred, inter alia, to document E/CN.6/615, which contains a relevant UNESCO report.

24/ Project No. 146 in the Inventory.

25/ Project Nos. 142, 145 and 150.
projects involve comparative studies regarding girls and boys, equal access to education, similarities or differences in curricula, variations in the school drop-out rate according to sex etc. They are concerned both with education in school and extracurricular education but on the whole one is struck by the very general nature of this type of study. With the exception of two interregional studies concerning women in scientific and technical careers and women in law faculties, no research with regard to the status of women in specific types of education has been traced. When these studies do refer to extracurricular education the type of education is never specified. Only two regional studies of ILO in Latin America and Asia are explicit on this question; they concern the vocational training of women and deal with several countries. 26/
The impression given by this survey of educational research is that questions relating to women’s vocational training needs, types of training, and the nature, duration and whereabouts of such training are particularly neglected in current studies.

Status of women

36. That status of women in developing countries is an issue which arouses great interest: 115 studies, or 26 per cent of the total listed, deal with that subject. The studies are apportioned as follows:

<table>
<thead>
<tr>
<th>Subcategory</th>
<th>RD</th>
<th>PQ</th>
<th>NS</th>
<th>ST</th>
<th>COM</th>
<th>PP</th>

<td>100</td>
</tr>
</tbody>
</table>

2/ RD - rural development; PQ - population questions; NS - not specified; ST - statistics; COM - communication; PP - political participation; LE - legislation; AP - apartheid.

37. It is chiefly the status of rural women which has claimed the attention of those engaged in the research projects, and a parallel can perhaps be drawn with the predominance of this subcategory in studies concerning employment. If all the studies relating to rural areas and rural development are drawn together in the same way as those related to family planning, it will be noted that they amount to 105, or 24 per cent of the studies currently under way. While earlier it was stated that almost one study in five was concerned with population questions, it can now be observed that one study in four deals with the status of rural women in various aspects.

26/ Project Nos. 138 and 140.
38. The subcategory "Statistics" will also be mentioned in the "Status of women" category. This subcategory in fact involves research carried out by UNICEF at the regional level in Africa and by UNESCO at the interregional level in order to identify the indicators which make it possible to measure women's participation in socio-economic development in a variety of social and cultural contexts. This type of statistical measurement seems to be of cardinal importance in evaluating the situation of women in development.

39. On the other hand, in the "Status of women" category there have been only two studies on the needs expressed by women, few studies concerning political participation and only one on the status of refugee women, although there have been several studies on the relationship between male migrations and changes in the socio-economic status of women and their decision-making authority in the family and the community.

Multidisciplinary studies

40. As noted above, these studies are mostly carried out at the interregional level and deal with several fields simultaneously. They are the result of co-operation between various organizations, and several of them analyse the effects of change and modernization on the economic and social status of women.

2. Geographical distribution of the studies

41. The studies are geographically distributed as follows:

Table VI. Studies on women by region and by category

a/ SW - status of women; ED - education; EM - employment; HE - health; MD - multidisciplinary.

42. The largest number of studies on women are being done in Africa (39 per cent), then in Latin America (22 per cent) and, lastly, at the interregional level (18 per cent). The same proportion prevails in every category, with the exception of education, a field which is currently
neglected in Africa but which is studied more frequently in Latin America: studies on education in Latin America account for 46 per cent of all studies on women conducted in this continent. If one examines this situation more closely in terms of each country, one notices certain obvious disparities.

43. **Africa.** One finds that no studies on women have been done in the following countries: Burundi, Cape Verde, the Central African Republic, Chad, the Congo, Djibouti, Equatorial Guinea, Gabon, Guinea-Bissau, Seychelles and Uganda. On the other hand, in descending order, eight studies have been conducted in Egypt, eight in Kenya, seven in the United Republic of Tanzania, six in Ghana, six in the Ivory Coast, six in Mali, six in Sierra Leone and six in Tunisia. In other words, 44 per cent of all such studies are concentrated in eight of the 37 African countries.

44. **Asia.** No studies on women have been done in Bhutan, China, Democratic Kampuchea, Iran, Laos, Maldives, Nepal, Singapore, Viet Nam or Solomon Islands. The disparities by country are less striking than in Africa; only India has conducted more than the average number of studies, a fact that is probably easily explained by its geographical size and the diversity of its population.

45. **Latin America.** Specific studies on women, conducted under the auspices of the United Nations, have not been done in the Bahamas, Grenada, Honduras, Nicaragua, Suriname, Trinidad and Tobago or Saint Lucia. In the other countries, an average of two or three studies are being conducted in every country, except for Colombia, Mexico and Peru, each of which is currently carrying out nine studies on women. In other words, these three countries together account for nearly 40 per cent of the studies being conducted in Latin America.

46. **Western Asia.** No studies are being conducted on women in Kuwait, Oman, Qatar or the United Arab Emirates; the studies currently under way in the region are divided equally among the other countries of the region.

3. **Participation of organizations of the United Nations system in research projects on women**

47. Data on the participation of the organizations of the United Nations system in research activities concerning women have been summarized in a table showing the percentage of such participation in descending order. The table naturally includes the regional centres and programmes within the United Nations system engaged in research and training on behalf of women.

a/ The figures indicate the number of times an organization participates in a research project, regardless of the number of countries covered by the project. The total figure, 328, is greater than the number of projects, 228, because several organizations may be participating in a single project.

b/ Comprising the following: ESCAP, ECLA, ECA, ECWA, UNIDO, UNICEF, UNDP, WFP, UNHCR, UNITAR, UNU, IBRD, IDCD, DIESA, CSIDHA, OAUN, UNRISD, CELADE, RAMI.

48. The tables show that, generally speaking, the organizations of the system execute, participate in or finance research on women in their specific area of activity. For example, of the 45 studies in which the International Labour Office (ILO) is participating, 38 concerned employment and, of the
19 studies in which WHO is participating, 18 deal with women's health. It also shows that UNESCO, as is to be expected, is the leader in education: it is participating in 12 of the 18 studies being conducted in this area. However, it should be noted that UNESCO has extended its field of research well beyond education and has initiated a large number of studies on the status of women (28 studies out of a total of 47). The same is true for UNICEF, which is concentrating half of its research activities on the status of women.

49. Because studies on rural development and on food have been reclassified, the studies conducted by FAO fall primarily in the "Employment" and "Health" categories, as defined in this document.

On the other hand, the research on women conducted by the United Nations Fund for Population Activities (UNFPA) is divided more or less equally among the different areas, with the exception of education in which UNFPA is participating in only one project. The relative frequency of its participation in multidisciplinary studies deserves mention and confirms previous findings, namely, that there exists a systematic relationship between the population variable and other variables affecting the status of women (see para. 31 above).

50. It was also decided that the research activities conducted by the the Voluntary Fund for the United Nations Decade for Women and by the regional centres and programmes for women should be indicated. The Fund is participating in approximately 5 per cent of the United Nations studies involving women, primarily in the areas of employment and the status of women. However, the Fund

---

27/ For previous research activities on the health of women, see WHO publications.

28/ See, however, the case studies on Haiti, Indonesia, Rwanda and Syria which are to be published shortly by UNDP under the title Action-oriented Assessment of Rural Women's Participation in Development. These four studies, which deal with women's participation in rural development, have not been included in the Inventory because as UNDP explained in its reply (see para. 15 above), it did not consider these studies to be research projects on women as such. Mention will be made of these studies, however, because this type of action-oriented research represents a new approach aimed at improving UNDP's methods of providing assistance. By supplying information on women's participation in rural development, this type of case study should help planners to find answers to questions raised about women's real contribution to economic activity and to draw up an over-all development strategy.

29/ Details of the UNFPA projects included in the Inventory were sent in reply to a letter requesting information about research on women; in so far as research on family planning, maternal and child care and nutrition was considered by its very nature to be research concerning women, the list received was supplemented by information obtained from the relevant project documents. However, because of the time-limits and the large number of research activities concerned, it has not been possible to analyse all the current projects. Accordingly, the list of UNFPA projects should be viewed as a compilation of the most important projects rather than as an exhaustive list. Readers wishing to have additional information may refer to the newsletters, the journal and the other publications and reports of UNFPA.
is not participating in any multidisciplinary studies.

51. The regional Centre at Addis Ababa (ATRCW) is especially active in conducting research on women, specifically with regard to the status of women: it is carrying out more than 9 per cent of all studies currently under way within the United Nations system. \[20/\] This achievement is all the more remarkable, since the Centre was founded only recently and has operated, since the beginning, with a limited staff. As to the Centre at Bangkok, most of its research activities have also been directed towards employment and the status of women.

52. Lastly, in analysing participation by organizations of the United Nations system in studies on women, their contribution was considered not only by category, but also by region. In which regions are the organizations engaged in research activities, and how frequent are such activities?

</table>

\[a/\] Table based on the annexed information. Within a single category, studies were counted each time an organization of the system participated and each time a particular country was concerned. The organizations are listed in alphabetical order.

\[b/\] N.S. - number of studies; % - percentage.

53. In the section entitled "Geographical distribution of the studies", it was indicated, \textit{inter alia}, that 40 per cent of all studies on women are being done in Africa (see para. 42 above). It is now time to consider in what relative proportions these studies are divided among the different organizations of the system and how they distribute their research activities differently, depending on the continent.

\[20/\] For all the studies published by ATRCW, see Women and Development in Africa: An Annotated Bibliography. (ECA/SDD/ATRCW/Biblog./77).
54. Table VIII shows that, in general, Africa is the predominant region in terms of research on women for VFDW (80.6 per cent of the studies financed by the Fund are conducted in Africa), for UNICEF (65 per cent of its studies), for UNFPA (50 per cent of its studies) and for FAO (36.5 per cent of its studies). As a result, these four organizations obviously conduct fewer research activities on women in other continents, and this is particularly true of Asia (VFDW: 12 per cent; UNICEF: 4.3 per cent; UNFPA: 7.4 per cent; and FAO: 3.84 per cent).

55. With regard to ILO, 45 per cent of its research activities concerning women are conducted in Latin America; in this continent, ILO seems clearly to be the organization most involved in research on women.

56. The research activities conducted by WHO and UNESCO are relatively equally divided among the various regions, in keeping with a policy of geographical balance which is also reflected in their participation in interregional studies (WHO: 47.6 per cent; UNESCO: 27.8 per cent). It may also be noted that 28.5 per cent of the UNFPA studies are conducted at the interregional level as a result, *inter alia*, of the Fund's participation in multidisciplinary studies together with ILO and UNESCO.

57. The interregional approach of UNESCO is frequently apparent. The three main studies currently in progress - "Women's education and fertility", "Family structure, socio-economic change and demographic trends" and "Status of women in relation to development and demographic change"- are all comparative cross-cultural studies conducted in countries having very different levels of development. 31\* Some organizations take diametrically opposite approach, for example, VFDW, which does not finance any interregional studies, encouraging instead more operation-oriented studies at the country level. 32\* By the same token, the United Nations regional centres and commissions, acting in accordance with their mandates, concentrate on studies conducted in their respective regions.

D. CONCLUSIONS AND PROVISIONAL PROPOSALS

58. In summarizing the various observations made in this Inventory of research projects on women carried out within the United Nations system, it may be said that current studies focus primarily, in order of importance, on employment, the status of women in rural areas, nutrition, "family health" and the relationship between the fertility of women in the developing countries and their social status, occupational activity, income and level of education.

31\* E/CN.6/632, para. 49.

32\* This policy has been described in the following manner: "As data and relevant information about the condition of women's lives are generally poor, data-collection and action-oriented research activities, including surveys, inventories, case studies and country profiles, are needed and serve as useful initial inputs for the systematic preparation and planning of medium- and long-term activities designed to augment national development". A/34/612, para. 21 (a)
59. These studies reflect the present concerns of the organizations of the system and the obvious effort which has been, and is still being made to improve understanding of the situation of women in rural areas and to assess their contribution to economic activities in such areas.

60. It is apparent from the preceding discussion that, because they are so clearly concentrated in the fields just mentioned, research activities have neglected many areas in which it would also be desirable to study the situation of women at greater length. For example: the work done by women in some of the specialized industries installed in the developing countries; women and commercial activities; appropriate technologies applied to women's work. In this connexion, it might be interesting to study the role currently played by women and the role they might come to play in efforts to protect the environment, to introduce energy conservation techniques and to develop renewable resources. 33/

61. In another area, health, a large number of studies relate to birth spacing and fertility control, but few are concerned with the health of the women themselves, on illnesses related to their work in agricultural production and in the home, or on ways of treating such illnesses. 34/ Herein lies an important area for research.

62. Lastly, in the field of education, surprisingly few studies deal specifically with the vocational training of women; it would appear useful to study this question in greater depth, since vocational training is one of the main ways in which women can participate in development.

63. The Inventory has left aside the question of women and the media, a subject on which some studies have been done. The reader will find information on this topic in the report of the seminar organized by UNESCO from 20 to 23 May 1980, in New York. 35/

64. Lastly, in concluding this brief analysis of research activities relating to women, attention should be drawn to the very small number of studies being conducted on the situation of women in decision-making bodies. Some studies are being done on women's participation in politics and their

33/ Some studies deal with appropriate technologies, primarily in Africa, but in general they do not tackle these question; instead they concentrate on ways of simplifying women's traditional tasks with a view to making their work less burdensome and obtaining better results from their efforts.

34/ Participants in the national seminar on improving living conditions in rural areas, organized in 1975 in the People's Republic of the Congo by ECA, in co-operation with FAO and other bodies, requested, in particular, that specific research and activities should be undertaken in connexion with diseases and accidents related to women's work in rural areas. See the report of the seminar, published by ATROW in the "Reports of seminars" series.

35/ Seminar on Women and the Media (W完W/SEM.1/23 May 1980).
role in liberation movements. Most of these are cross-cultural analyses at the interregional level, and they are very useful and informative because, by comparing different levels of development and different historical conditions, they reveal the dynamics of the status of women. However, studies of this kind should surely be accompanied by specific case studies on the situation of women and the role they play in decision-making bodies at the national level (political parties, public administration, planning bodies, special-interest groups, etc.). By making a detailed analysis of the situation of women in one particular country at a given time, such studies would help to pinpoint those areas in which action should be taken in order to enable women truly to participate in development.

65. The purpose in making these few suggestions for future studies is not to exhaust the subject, but merely to indicate certain areas in which research by organizations of the United Nations system, and in particular by INSTRAW, might be undertaken in the future.

PROMOTION OF MATERNAL AND CHILD HEALTH AND FAMILY PLANNING POLICIES (RLA/79/P13)

New policy directions for national maternal and child health and family planning programmes are the goals of three operational research studies based on careful analysis of current programmes and problems in the region and include (i) a study to promote the use of demographic techniques to supplement incomplete registration when estimating maternal and child mortality; (ii) the design and implementation of national studies to determine reasons for the KAP gap (by those who are aware of family planning, feel that their families have reached a desired size, are exposed to pregnancy and are not using contraception) and (iii) research on the incidence and sequellae of illegal abortion

SPECIAL PROGRAMME FOR RESEARCH, DEVELOPMENT AND RESEARCH TRAINING IN HUMAN REPRODUCTION
(Programme spécial de recherche, de développement et de formation à la recherche relative à la reproduction humaine)

The purpose of this programme, which was launched in 1972, is to conduct research into birth control. There are 70 countries participating in this programme including 45 developing countries. Since 1978 the work has centred on the safety of contraceptive methods, the effectiveness and acceptability of existing family planning methods and the development of new methods, sterility and the health rationale for family planning.

The research is conducted in collaboration with WHO in centres of clinical research into human reproduction. There are 27 centres in 24 developing countries and 13 in 8 industrialized countries. The research focuses on five main themes: existing birth control methods, research into and development of new birth control methods, psychosocial research into birth control, investigation of family planning health services, study of sterility.

---

* When available, the documents prepared for the regional preparatory meetings of the World Conference of the United Nations Decade for Women were also reviewed.
Specialized agencies and other United Nations bodies

CS/DHA
Revised synthesis of organizations' activities and programmes relating to the advancement of women, 18 July 1977

DIESA
Review and appraisal of on-going and future activities relating to women and development, 2 June 1980

FAO
FAO activities related to women and development as listed in the ESHH/FAO "Cumulative Index," July 1979

List of Recent FAO documents prepared for the World Conference of the United Nations Decade for Women

FAO observations as requested in General Assembly resolution 33/184 on the improvement of the status and role of women in education and in the economic and social fields for the achievement of the equality of women with men

Women and family in rural development: annotated bibliography

TBRD

ILO
Women at work. An ILO news bulletin, February 1979

List of ILO activities related to women and development, April 1980

UNCRD
Bulletin 1979-80 and Publications list, 1980

UNDP
United Nations Technical Co-operation activities (DP/RF/20)

UNESCO
Inventory of UNESCO research and data collection activities related to women

UNFPA
Review of UNFPA's assistance to women, population and development projects (1969 - 1979)

Women's projects (GLO/77/P42)

UNICEF
Women, children and development (E/ICEF/L. 1409)

UNICEF activities related to women: research and data collection inventory

UNICEF's activities related to women: training activities inventory

Number of women trained with UNICEF's stipends, 1979

UNIDO
Integration of women in development (ID/B/165)

UNIDO activities in 1978 designed to secure greater involvement of women in industrial development (ID/B/213)

UNIDO activities in 1979 designed to secure greater involvement of women in industrial development (ID/B/236)
Integration of women in development (ID/CONF.4/18)

Project Proposal - The involvement and status of women in development: a cross-national comparison of the extent and nature of their participation in the development process in selected countries in Latin America, 15 June 1978

List of projects financially supported by the Voluntary Fund for the United Nations Decade for Women

Health and status of Women, January 1980

WHO-assisted projects in family health, January 1980

Research related to health problems specific to women

Selected WHO publications on women and health
